## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Sankaran et al. or Groenendaal et al of record on 1449.

The Sankaran reference discloses electrochromic polymers from alkyl derivatized poly(3,4-ethylenedioxythiophenes).

Note that said poly(ethylenedioxythiophene) has the repeating unit (see page 2582, right col. ), which is read on this of claim 1.

The reference further discloses the monomer synthesis, chemically or electrochemically, oxidatively polymerizing compounds of the formulae (see page 2582-2586) and specially, in Scheme 1 the mechanism to form the same or similar products.

The Groenendaal reference discloses a dimer and trimer of ethylenedioxythiophene (see page 485) of the claimed formula with  $x=0$ .

The reference further discloses the oxidative chemical polymerization and the electrochemical polymerization of the EDT based monomers (see page 486, right col.)

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1711

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sankaran et al. or Groenendaal of record on 1449.

The references disclose the compounds and the steps of the processes to form the products of the claimed formulae.

The disclosures of the references differ from the instant claims in that they do not disclose the use of the claimed Lewis acids and/or protic acids as catalysts.

However, the Sankaran reference does disclose the use of at least a diacid (see page 2583, left col.) and the Groenendaal reference does disclose the use of  $\text{FeCl}_3$  or  $\text{Fe}(\text{OTs})_3$  (see page 486, right col.) having the same functionality with the claimed catalysts.

Therefore, it would have been obvious to one of ordinary skill in the art to select the diacids, as disclosed in the Sankaran reference, or the  $\text{FeCl}_3$  or  $\text{Fe}(\text{OTs})_3$ , as disclosed in the Groenendaal reference, to replace said claimed catalysts since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said use.
